Assignment Questions for Interns

All tech profile (Front end Developer, Android Developer, iOS Developer, Tester (Web & App) (Answer limit Max.100 words for each question)

Q .1   What is technology stack?
Q .2   What is impossible to build with technology and codes?
Q .3   How are you spending your day, particularly in this pandemic situation, be real?

- Tech stack refers to tools and technologies which includes server infrastructure and programming languages, frameworks that are used in the deployment and development of websites, application, and many digital products.
  Structure-wise, tech stack consists of two equal elements. One is frontend or client-side; the other is server-side or backend. Combined, they create a stack.
- I personally believe that Ideation is a thing which a person can't create with technology and codes untill he/she didn't have a good thinking power .He/She can build any software or projects if that person have a good Idea/plan to execute/implement it and which features should add in this software so that it'll be very successful.
- In this period, I'm at my home , attending online classes from 10am to 4pm. After that spending time with my family by having snacks together and then, having calls and meeting with my Hackathon teammates to discuss about our work and projects. After dinner, I just back to my other communities works ,mentoring participants and solving their problems . Then, I focused on my personal projects or coding portion . While I just about to sleep I scrolled down my twitter feed untill i didn't sleep.
